

Open offices

Inserted into an existing New Jersey office building, this 45,000 sf build-out provides corporate offices and research & development facilities for an emerging technology company. The office areas have custom work stations arranged around internal courtyards for daylighting. The research zone contains clean rooms, chemical laboratories, gas storage facilities, and a computer center connected to an office-wide data networking system.

Phase 1 completed 1988. Phase 2 completed 1989
